

Uplands Junior L.E.A.D. Academy - Calculation Policy | Guidance

This calculation policy should assist you when you are planning to ensure that you can pitch accurately to the children in your class. It is important that we give access to all of our children; this can often be done by using the concrete – pictorial - abstract (CPA) approach. This allows us to conceptualise the abstract mathematics through the use of concrete resources; the children can actually see the math happening. This progresses into a representation of the concrete resource through the use of a diagram/ jotting or picture. The teacher should model the jottings that they know will be effective in the long run (although it is important for children to explore, conject and convince each other as to why their way is more effective).

#### **KEY STAGE 2**

In upper Key Stage 2, children build on secure foundations in calculation, and develop fluency, accuracy and flexibility in their approach to the four operations. They work with whole numbers and adapt their skills to work with decimals, and they continue to develop their ability to select appropriate, accurate and efficient operations.

**Key language:** decimal, column methods, exchange, partition, mental method, ten thousand, hundred thousand, million, factor, multiple, prime number, square number, cube number

Addition and subtraction: Children build on their column methods to add and subtract numbers with up to seven digits, and they adapt the methods to calculate efficiently and effectively with decimals, ensuring understanding of place value at every stage.

Children compare and contrast methods, and they select mental methods or jottings where appropriate and where these are more likely to be efficient or accurate when compared with formal column methods.

Bar models are used to represent the calculations required to solve problems and may indicate where efficient methods can be chosen. **Multiplication and division:** Building on their understanding, children develop methods to multiply up to 4-digit numbers by single-digit and 2-digit numbers.

Children develop column methods with an understanding of place value, and they continue to use the key skill of unitising to multiply and divide by 10, 100 and 1,000.

Written division methods are introduced and adapted for division by single-digit and 2-digit numbers and are understood alongside the area model and place value. In Year 6, children develop a secure understanding of how division is related to fractions.

Multiplication and division of decimals are also introduced and refined in Year 6.

**Fractions:** Children find fractions of amounts, multiply a fraction by a whole number and by another fraction, divide a fraction by a whole number, and add and subtract fractions with different denominators. Children become more confident working with improper fractions and mixed numbers and can calculate with them.

Understanding of decimals with up to 3 decimal places is built through place value and as fractions, and children calculate with decimals in the context of measure as well as in pure arithmetic.

Children develop an understanding of percentages in relation to hundredths, and they understand how to work with common percentages: 50%, 25%, 10% and 1%.

		Year 5	
	Concrete	Pictorial	Abstract
Year 5 Addition			
Column addition with whole numbers	Use place value equipment to represent additions.  TTh Th H T O O O O O O O O O O O O O O O O O O	Represent additions, using place value equipment on a place value grid alongside written methods.  The property of the place value grid alongside written methods.  Integration of the place value grid alongside written methods.  Integration of the place value grid alongside written methods.  Integration of the place value grid alongside written methods.	Use column addition, including exchanges.  TTh Th H T O
Representing additions		Bar models represent addition of two or more numbers in the context of problem solving.  ?  £19,579 £28,370 £16,725  Jen £2,600 Holly £2,600 £1,450 ?	Use approximation to check whether answers are reasonable.    TTh Th H T O     TTh Th H T O

		Th H T O 2 6 0 0 + 1 4 5 0 4 0 5 0	
Adding tenths	Link measure with addition of decimals.  Two lengths of fencing are 0.6 m and 0.2 m.  How long are they when added together?  0.6 m 0.2 m	Use a bar model with a number line to add tenths.	Understand the link with adding fractions. $\frac{6}{10} + \frac{2}{10} = \frac{8}{10}$ $6 \text{ tenths} + 2 \text{ tenths} = 8 \text{ tenths}$ $0.6 + 0.2 = 0.8$
Adding decimals using column addition	Use place value equipment to represent additions.  Show 0.23 + 0.45 using place value counters.	Use place value equipment on a place value grid to represent additions.  Represent exchange where necessary.  The Hth 2 q 6 + 1 0 4 +	Add using a column method, ensuring that children understand the link with place value.  O Tth Hth  O O O O O O O O O O O O O O O O O O O

			Include additions where the numbers of decimal places are different.
Year 5 Subtraction			
Column subtraction with whole numbers	Use place value equipment to understand where exchanges are required.  2,250 – 1,070 = ?	Represent the stages of the calculation using place value equipment on a grid alongside the calculation, including exchanges where required.  15,735 - 2,582 = 13,153  The The Head of the calculation of t	Use column subtraction methods with exchange where required. Year 5 Multiplication									
Understanding factors	Use cubes or counters to explore the meaning of 'square numbers'.			lore examp e numbers.		and	d non		Understand the pattern of square numbers in the multiplication tables.
	25 is a square number because it is made from 5 rows of 5.	$8 \times 8 = 6$ $8^2 = 64$	64						Use a multiplication grid to circle each square number. Can children spot a pattern?
	Use cubes to explore cube numbers.								

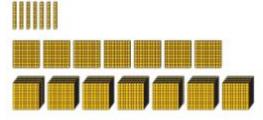

12 is not a square number, because you cannot multiply a whole number by itself to make 12.

### Use place value equipment to multiply by 10, 100 and 1,000 by unitising.

$4 \times 1 = 4$ ones = 4	9	8	8	
$4 \times 10 = 4 \text{ tens} = 40$	amman			<del></del>
4 × 100 = 4 hundreds = 400				

Understand the effect of repeated multiplication by 10.

 $7 \times 10 = 70$ 

 $7 \times 100 = 7,000$ 

 $7 \times 1,000 = 70,000$ 

Understand how exchange relates to the digits when multiplying by 10, 100 and 1.000.

 $17 \times 10 = 170$ 

 $17 \times 100 = 17 \times 10 \times 10 = 1.700$ 

 $17 \times 1,000 = 17 \times 10 \times 10 \times 10 = 17,000$ 

### Multiplying by multiples of 10, 100 and 1,000

Use place value equipment to explore multiplying by unitising.

5 groups of 3 ones is 15 ones. 5 groups of 3 tens is 15 tens.

Use place value equipment to represent how to multiply by multiples of 10, 100 and 1,000.

 $4 \times 3 = 12$  $4 \times 300 = 1,200$ 

 $6 \times 4 = 24$  $6 \times 400 = 2,400$  Use known facts and unitising to multiply.

 $5 \times 4 = 20$ 

 $5 \times 40 = 200$ 

 $5 \times 400 = 2.000$ 

 $5 \times 4,000 - 20,000$ 

 $5.000 \times 4 = 20.000$ 

	So, I know that 5 groups of 3 thousands would be 15 thousands.		
Multiplying up to 4-digit numbers by a single digit	Explore how to use partitioning to multiply efficiently. $8 \times 17 = ?$ $8 \times 10 = 80$ $8 \times 10 = 80$ $8 \times 7 = 56$ $80 + 56 = 136$	Represent multiplications using place value equipment and add the 1s, then 10s, then 100s, then 100s, then 1,000s.  H T O O O O O O O O O O O O O O O O O	Use an area model and then add the parts. $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$
Multiplying 2- digit numbers by 2-digit numbers	Partition one number into 10s and 1s, then add the parts. $23 \times 15 = ?$ $10 \times 15 = 150$ $10 \times 15 = 150$ $\frac{H}{1} \times \frac{T}{0}$ $1 \times 5$ $1 \times 5$ $1 \times 5$ There are 345 bottles of milk in total.	Use an area model and add the parts. $28 \times 15 = ?$ $10 \text{ m}$ $20 \times 10 = 200 \text{ m}^2$ $5 \text{ m}$ $20 \times 5 = 100 \text{ m}^2$ $8 \times 10 = 80 \text{ m}^2$ $8 \times 5 = 40 \text{ m}^2$ $8 \times 5 = 40 \text{ m}^2$ $8 \times 15 = 420$	Use column multiplication, ensuring understanding of place value at each stage.    3   4

	23 × 15 = 345		
Multiplying up to 4-digits by 2-digits		Use the area model then add the parts.    100	Use column multiplication, ensuring understanding of place value at each stage.  Th H T O

	First multiply 1,274 by 2.    TTh Th H T O
	Then multiply 1,274 by 30.    TTh Th
	Finally add up the numbers.    TTh Th H T O

Multiplying decimals by 10, 100 and 1,000	Use place value equipment to explore and understand the exchange of 10 tenths, 10 hundredths or 10 thousandths.	Represent multiplication by 10 as exchange on a place value grid.  i) $0.14 \times 10 = $ O Tth Hth Hth O O O O O O O O O O O O O O O O O O O	Understand how this exchange is represented on a place value chart. $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$
Year 5 Division			
Understanding factors and prime numbers	Use equipment to explore the factors of a given number.  24 ÷ 3 = 8 24 ÷ 8 = 3  8 and 3 are factors of 24 because they divide 24 exactly.  24 ÷ 5 = 4 remainder 4.	Understand that prime numbers are numbers with exactly two factors. $13 \div 1 = 13$ $13 \div 2 = 6 r 1$ $13 \div 4 = 4 r 1$ 1 and 13 are the only factors of 13. 13 is a prime number.	Understand how to recognise prime and composite numbers.  I know that 31 is a prime number because it can be divided by only 1 and itself without leaving a remainder.  I know that 33 is not a prime number as it can be divided by 1, 3, 11 and 33.  I know that 1 is not a prime number, as it has only 1 factor.

	5 is not a factor of 24 because there is a remainder.		
Understanding inverse operations and the link with multiplication, grouping and sharing	Use equipment to group and share and to explore the calculations that are present.  I have 28 counters.  I made 7 groups of 4. There are 28 in total.  I have 28 in total. I shared them equally into 7 groups. There are 4 in each group.  I have 28 in total. I made groups of 4. There are 7 equal groups.	Represent multiplicative relationships and explore the families of division facts. $60 \div 4 = 15$ $60 \div 15 = 4$	Represent the different multiplicative relationships to solve problems requiring inverse operations.   2 ÷ 3 =
Dividing whole numbers by 10, 100 and 1,000	Use place value equipment to support unitising for division. $4,000 \div 1,000$ $4,000 \times 1,000$ $4,000 \times 1,000 \times 1,000 \times 1,000 \times 1,000 \times 1,000$ $4,000 \times 1,000 \times 1,0$	Use a bar model to support dividing by unitising. $380 \div 10 = 38$ 380  7 7 7 7 7 7 7 7 7 7 7 7 7 7 7 7 7 7 7	Understand how and why the digits change on a place value grid when dividing by 10, 100 or 1,000.  The House of the Total Control of the Total Control of The House of the Total Control of The House of Total Control of The House of Total Control of Total Contro

Dividing by
multiples of 10,
100 and 1,000

Use place value equipment to represent known facts and unitising.

15 ones put into groups of 3 ones. There are 5 groups.

$$15 \div 3 = 5$$

15 tens put into groups of 3 tens. There are 5 groups.

$$150 \div 30 = 5$$

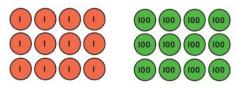

Represent related facts with place value equipment when dividing by unitising.

180 is 18 tens.

18 tens divided into groups of 3 tens. There are 6 groups.

$$180 \div 30 = 6$$

12 ones divided into groups of 4. There are 3 groups.

12 hundreds divided into groups of 4 hundreds. There are 3 groups.

$$1200 \div 400 = 3$$

Reason from known facts, based on understanding of unitising. Use knowledge of the inverse relationship to check.

$$3,000 \div 5 = 600$$
  
 $3,000 \div 50 = 60$   
 $3,000 \div 500 = 6$ 

$$5 \times 600 = 3,000$$
  
 $50 \times 60 = 3,000$   
 $500 \times 6 = 3,000$ 

### Dividing up to four digits by a single digit using short division

Explore grouping using place value equipment.

268 ÷ 2 = ?

There is 1 group of 2 hundreds. There are 3 groups of 2 tens. There are 4 groups of 2 ones.

 $264 \div 2 = 134$ 

Use place value equipment on a place value grid alongside short division.

The model uses grouping.

A sharing model can also be used, although the model would need adapting.

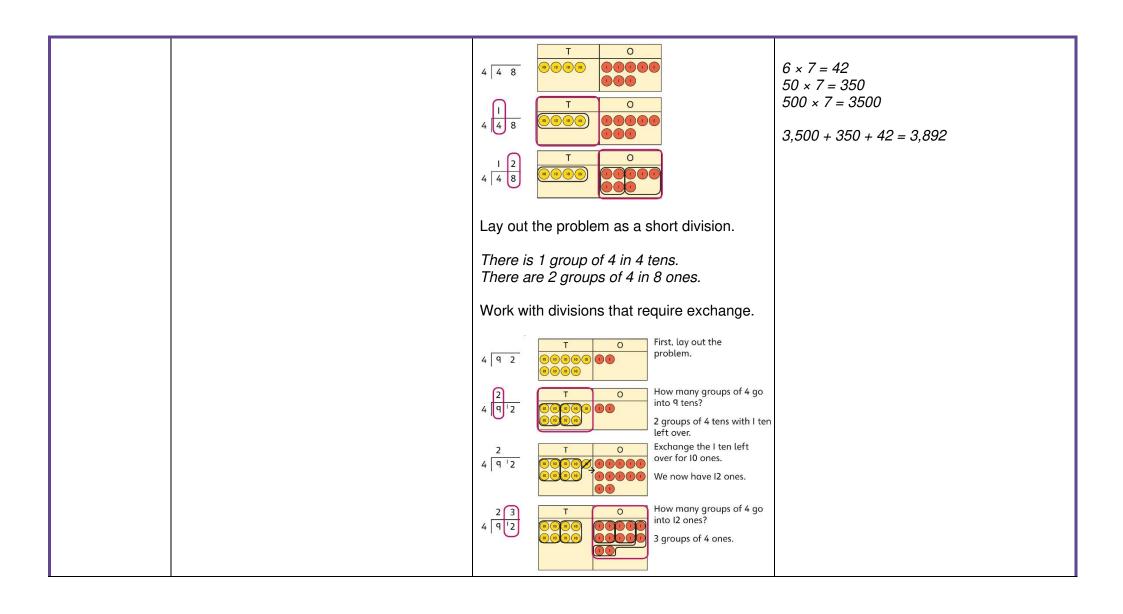

Use short division for up to 4-digit numbers divided by a single digit.

	0	5	5	6	
7	3	<sup>3</sup> 8	³q	<sup>4</sup> 2	

 $3,892 \div 7 = 556$ 

Use multiplication to check.

 $556 \times 7 = ?$ 

# **Understanding** remainders

Understand remainders using concrete versions of a problem.

80 cakes divided into trays of 6.

80 cakes in total. They make 13 groups of 6, with 2 remaining.

Use short division and understand remainders as the last remaining 1s.

T O Lay out the problem as short division.

T O How many groups of 6 go into 8 tens?

There are 2 tens remaining.

T O How many groups of 6 go into 20 ones?

There are 3 groups of 6

ones.

There are 2 ones remaining.

In problem solving contexts, represent divisions including remainders with a bar model.

		683			
136	136	136	136	136	3

$$683 = 136 \times 5 + 3$$
  
 $683 \div 5 = 136 \text{ r } 3$ 

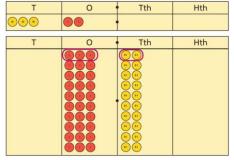

# Dividing decimals by 10, 100 and 1,000

Understand division by 10 using exchange.

2 ones are 20 tenths.

20 tenths divided by 10 is 2 tenths.

Represent division using exchange on a place value grid.

32 is 3 tens and 2 ones.

This is equivalent to 30 ones and 20 tenths.

- 30 ones divided by 10 is 3 ones.
- 20 tenths divided by 10 is 2 tenths.
- 32 divided by 10 is 3.2.

Understand the movement of digits on a place value grid.

0 4	Tth	Hth	Thth
0.	8_	5_	
0	0/2	78	$\lambda_5$

$$0.85 \div 10 = 0.085$$

$$8.5 \div 100 = 0.085$$

### Understanding the relationship between fractions and division

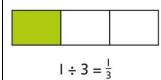

Use sharing to explore the link between fractions and division.

1 whole shared between 3 people. Each person receives one-third.

Use a bar model and other fraction representations to show the link between fractions and division.

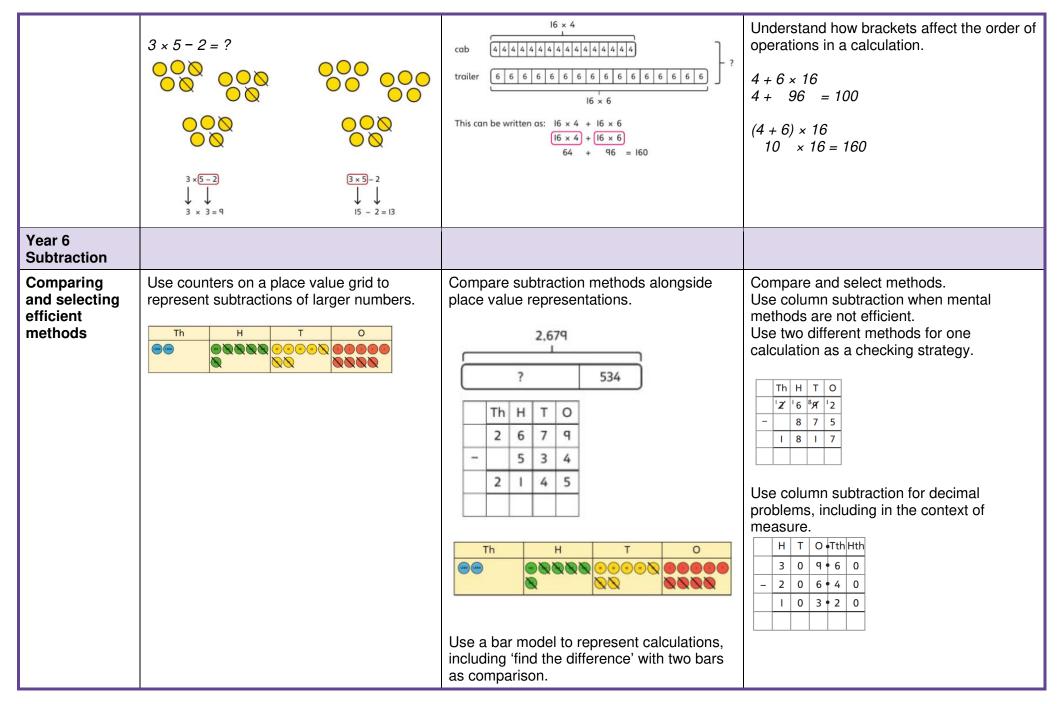

Use the link between division and fractions to calculate divisions.

$$5 \div 4 = \frac{5}{4} = 1\frac{1}{4}$$

$$11 \div 4 = \frac{11}{4} = 2\frac{3}{4}$$

Year 6					
	Concrete	Pictorial	Abstract		
Year 6 Addition					
Comparing and selecting efficient methods	Represent 7-digit numbers on a place value grid and use this to support thinking and mental methods.	Discuss similarities and differences between methods, and choose efficient methods based on the specific calculation. Compare written and mental methods alongside place value representations.	Use column addition where mental methods are not efficient. Recognise common errors with column addition.  17,877 + 4,012 = ?    TTh Th H T 0		
		Use bar model and number line representations to model addition in problem-solving and measure contexts.			

		+1 hour +8 minutes 12:05 13:05 13:13	Which method has been completed accurately?  What mistake has been made?  Column methods are also used for decimal additions where mental methods are not efficient.
Selecting mental methods for larger numbers where appropriate	Represent 7-digit numbers on a place value grid and use this to support thinking and mental methods.  2,411,301 + 500,000 = ?  This would be 5 more counters in the HTh place.  So, the total is 2,911,301.  2,411,301 + 500,000 = 2,911,301	Use a bar model to support thinking in addition problems.  257,000 + 99,000 = ?  \$\frac{2}{5}\$ \$\frac{1}{2}\$ \$\frac{2}{5}\$ \$\frac{1}{2}\$ \$\fra	Use place value and unitising to support mental calculations with larger numbers. $195,000 + 6,000 = ?$ $195 + 5 + 1 = 201$ $195 \text{ thousands} + 6 \text{ thousands} = 201$ $thousands$ So, $195,000 + 6,000 = 201,000$
Understanding order of operations in calculations	Use equipment to model different interpretations of a calculation with more than one operation. Explore different results.	Model calculations using a bar model to demonstrate the correct order of operations in multi-step calculations.	Understand the correct order of operations in calculations without brackets.

Subtracting mentally with		computer game  puzzle book  fil2·50  Use a bar model to show how unitising can support mental calculations.	Subtract efficiently from powers of 10.
larger numbers		950,000 - 150,000 That is 950 thousands - 150 thousands  950  950  950  950  950  950  950  So, the difference is 800 thousands. 950,000 - 150,000 = 800,000	10,000 - 500 = ?
Year 6 Multiplication			
Multiplying up to a 4-digit number by a single digit number	Use equipment to explore multiplications.  Th T O O O O O O O O O O O O O O O O O O	Use place value equipment to compare methods.  Method I	Understand area model and short multiplication.  Compare and select appropriate methods for specific multiplications. ### **Multiplying up** to a 4-digit number by a 2-digit number

Use an area model alongside written multiplication.

	200	30	5	
20	4,000	600	100	
- 1	200	30	5	
	4,200	+ 630 +	105	= 4,935

		2	3	5	
×			2	1	
				5	I×5
			3	0	1 × 30
		2	0	0	1 × 200
		1	0	0	20 × 5
		6	0	0	20 × 30
	4	0	0	0	20 × 300
	4	q	3	5	21 × 235

Use compact column multiplication with understanding of place value at all stages.

 $20 \times 235$  $21 \times 235$ 

Using knowledge of factors and partitions to compare methods for multiplications

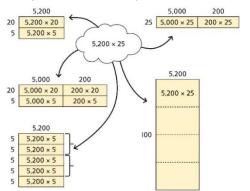

Use equipment to understand square numbers and cube numbers.

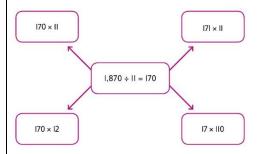

$$5 \times 5 = 5^2 = 25$$
  
 $5 \times 5 \times 5 = 5^3 = 25 \times 5 = 125$ 

Compare methods visually using an area model. Understand that multiple approaches will produce the same answer if completed accurately.

Represent and compare methods using a bar model.

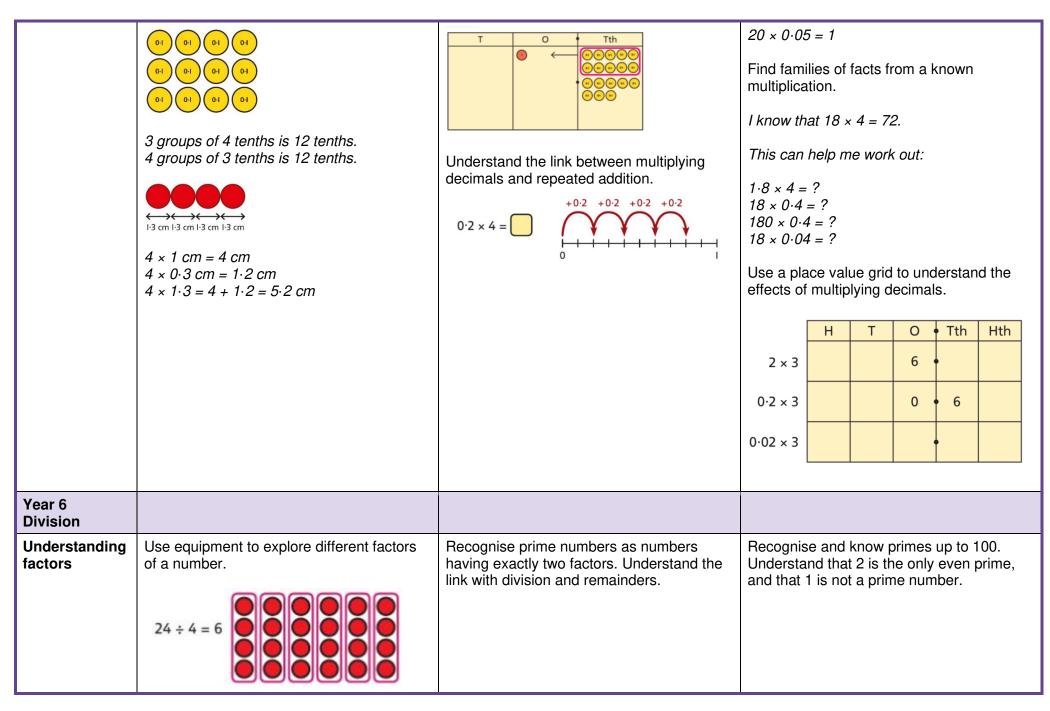

Use a known fact to generate families of related facts.

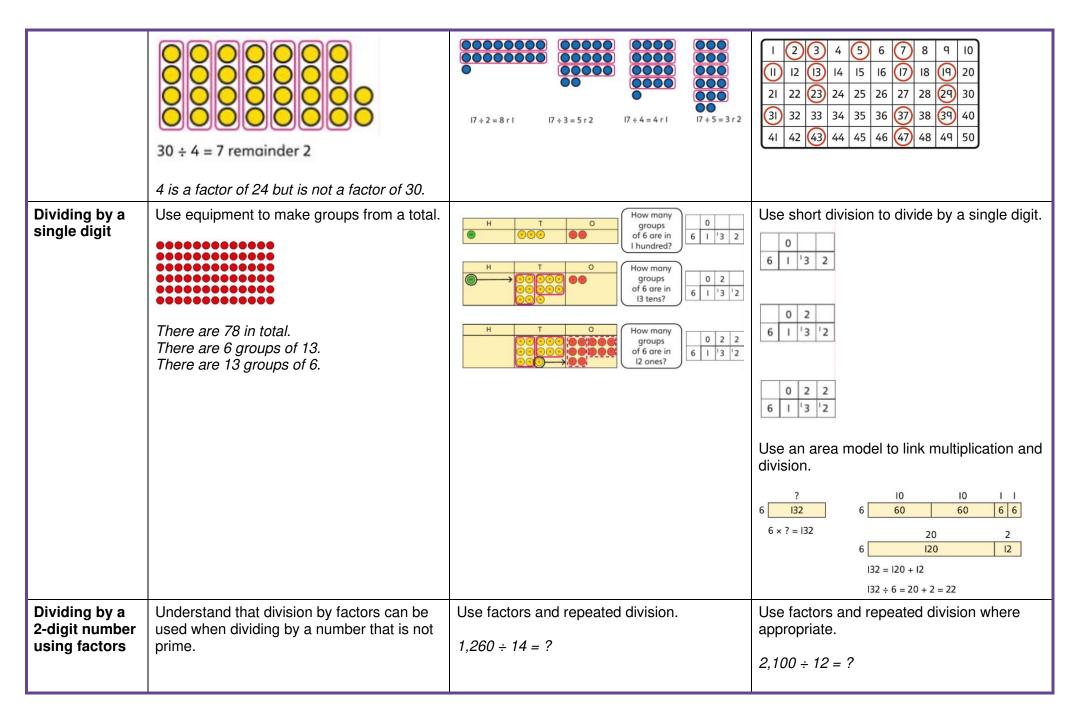

Use factors to calculate efficiently.

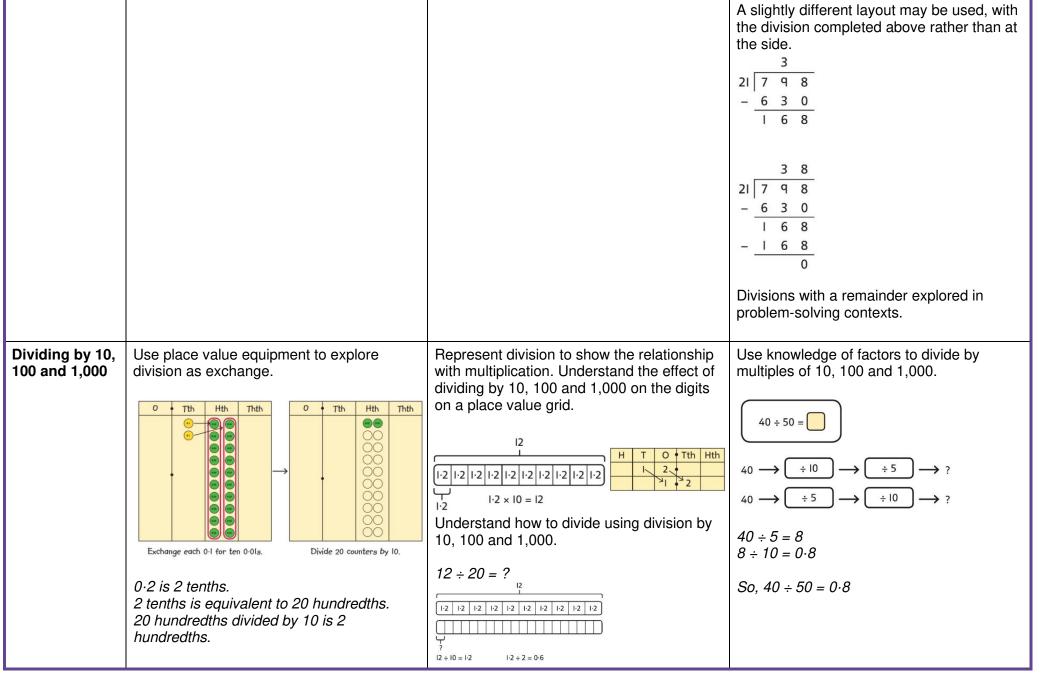

$$15 \times 16$$
$$= 3 \times 5 \times 2 \times 8$$

			= 3 × 8 × 2 × 5 = 24 × 10 = 240
Multiplying by 10, 100 and 1,000	Use place value equipment to explore exchange in decimal multiplication. $0.3 \times 10 = ?$ $0.3 \text{ is } 3 \text{ tenths.}$ $10 \times 3 \text{ tenths are } 30 \text{ tenths.}$ $30 \text{ tenths are equivalent to } 3 \text{ ones.}$ Represent $0.3$ .  The proof of ten-tenths are exchange each group of ten-tenths.	Understand how the exchange affects decimal numbers on a place value grid. $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$	Use knowledge of multiplying by 10, 100 and 1,000 to multiply by multiples of 10, 100 and 1,000. $8 \times 100 = 800$ $8 \times 300 = 800 \times 3$ $= 2,400$ $2.5 \times 10 = 25$ $2.5 \times 20 = 2.5 \times 10 \times 2$ $= 50$
Multiplying decimals	Explore decimal multiplications using place value equipment and in the context of measures.	Represent calculations on a place value grid. $6 \times 3 = 18$ $6 \times 0.3 = 1.8$	Use known facts to multiply decimals. $4 \times 3 = 12$ $4 \times 0.3 = 1.2$ $4 \times 0.03 = 0.12$ $20 \times 5 = 100$ $20 \times 0.5 = 10$

Di Mina I		$1,260 \div 2 = 630$ $630 \div 7 = 90$ $1,260 \div 14 = 90$	$2,100 \longrightarrow \left(\begin{array}{c} \div 2 \\ \end{array}\right) \longrightarrow \left(\begin{array}{c} \div 6 \\ \end{array}\right) \longrightarrow$ $2,100 \longrightarrow \left(\begin{array}{c} \div 6 \\ \end{array}\right) \longrightarrow \left(\begin{array}{c} \div 2 \\ \end{array}\right) \longrightarrow$ $2,100 \longrightarrow \left(\begin{array}{c} \div 3 \\ \end{array}\right) \longrightarrow \left(\begin{array}{c} \div 4 \\ \end{array}\right) \longrightarrow$ $2,100 \longrightarrow \left(\begin{array}{c} \div 4 \\ \end{array}\right) \longrightarrow \left(\begin{array}{c} \div 2 \\ \end{array}\right) \longrightarrow \left(\begin{array}{c} \div 2 \\ \end{array}\right) \longrightarrow$ $2,100 \longrightarrow \left(\begin{array}{c} \div 3 \\ \end{array}\right) \longrightarrow \left(\begin{array}{c} \div 2 \\ \end{array}\right) \longrightarrow \left(\begin{array}{c} \div 2 \\ \end{array}\right) \longrightarrow$
Dividing by a 2-digit number using long division	Use equipment to build numbers from groups.  182 divided into groups of 13. There are 14 groups.	Use an area model alongside written division to model the process. $377 \div 13 = ?$ 13	Use long division where factors are not useful (for example, when dividing by a 2-digit prime number). Write the required multiples to support the division process. $377 \div 13 = ?$ $ \begin{array}{c ccccccccccccccccccccccccccccccccccc$

## Dividing decimals

Use place value equipment to explore division of decimals.

8 tenths divided into 4 groups. 2 tenths in each group.

Use a bar model to represent divisions.

 $8 \div 4 = 2$ 

0.8				
?	?	?	?	

 $4 \times 2 = 8$ 

So, 
$$4 \times 0.2 = 0.8$$
  $0.8 \div 4 = 0.2$ 

Use short division to divide decimals with up to 2 decimal places.
